Letter of Recommendation

To whom it may concern:

Clearfield Construction successfully completed a sidewalks and drainage project for the Building and Equipment Services Department a week ahead of schedule in December. The project included sidewalk demolition, excavation, forming new sidewalks, and installing new drainage channels to accommodate the installation of PVC conduit that was extended from the building's rain gutter system at the Traffic Operations facility located on Cherry Street.

Our team was impressed with the professionalism and quality workmanship that Mr. Molina and his staff demonstrated throughout the process of responding to our requests and providing invaluable expertise in performing the installation. For example, the scope of work specified that the sidewalks were 4 feet wide when in actuality they were 5 feet wide, and Clearfield Construction's willingness to perform the necessary arrangements for the increased volume of work to ensure that the installation was accurate reflected their commitment to excellence.

I would highly recommend Clearfield Construction to any organization seeking to have high quality professional services performed on their project.

Sincerely,

A handwritten signature in black ink, appearing to read "Ron Griego".
